

Web Development Capstone Project

Project Title

Event Booking System

Project Overview

The Event Booking System is a web-based application designed to help users discover, book, and manage events online. The platform allows event organizers to create events and users to register and book tickets through an interactive dashboard.

This project gives students practical exposure to full-stack web development, database management, authentication systems, and real-world booking workflows used in modern event management platforms.

Project Objective

Develop a web application that can:

- Display upcoming events
 - Allow users to register and log in
 - Enable ticket booking and event registration
 - Manage event details and bookings
 - Generate booking confirmations and reports
-

Industry Relevance

This project is inspired by systems used in:

- Event management companies
- Ticket booking platforms
- College fest management systems
- Webinar and workshop platforms
- Entertainment and conference websites

Students will understand how modern booking and management systems function in real-world applications.

Project Modules

Module 1: User Authentication System

Develop:

- User registration
- Login and logout
- Password validation
- Session management

Learning Outcomes

- Authentication systems
 - User management
 - Backend integration
-

Module 2: Event Management

Allow organizers/admins to:

- Add events
- Update event details
- Upload banners/images
- Set event dates and venue information

Learning Outcomes

- CRUD operations
 - Database handling
 - Admin panel development
-

Module 3: Ticket Booking System

Users can:

- View available events
- Book tickets
- Select number of seats
- Receive booking confirmation

Learning Outcomes

- Booking workflows
- Form handling
- Transaction logic

Module 4: Dashboard & Booking Analytics

Display:

- Upcoming events
- Booking history
- Event statistics
- User activity

Learning Outcomes

- Dashboard development
- Data visualization
- Reporting systems

Module 5: Notification & Report System

Generate:

- Booking confirmations
- Event reports
- Registration summaries

Optional:

- Email notifications

Learning Outcomes

- Notification systems
- Automated reporting
- User communication workflows

Recommended Tech Stack

Frontend

- HTML
- CSS
- JavaScript
- Bootstrap or React.js

Backend

- Node.js / Express.js
or
- Python Flask

Database

- MySQL / MongoDB

Deployment

- Render
- Netlify
- Vercel

Project Workflow

1. User Registration & Login
2. Event Creation
3. Event Listing
4. Ticket Booking
5. Booking Confirmation
6. Dashboard & Reports

Deliverables

Students must submit:

- Source Code
- Project Report
- PPT Presentation
- GitHub Repository
- Deployment Link
- Demo Video
- Database Schema

Scope Limitations

Students should avoid:

- Real payment gateway integration
- Large-scale event management systems
- Multi-vendor platforms
- Advanced cloud architecture

Focus should remain on building a clean and functional booking platform.

25-Day Project Plan

Days	Tasks
Day 1–3	Requirement Analysis and UI Planning
Day 4–7	User Authentication Module
Day 8–12	Event Management System
Day 13–17	Ticket Booking Functionality
Day 18–21	Dashboard and Reports
Day 22–23	Notifications and Testing
Day 24	Bug Fixing and Optimization
Day 25	Deployment and Final Presentation

Evaluation Criteria

Criteria	Weightage
Functionality	30%
Frontend/UI	20%
Backend & Database	25%
Booking Workflow	10%
Deployment	10%
Documentation	5%

Final Outcome

By completing this project, students will learn:

- Full-stack web development
- Authentication systems
- Database integration
- Booking workflow implementation
- Dashboard development
- Deployment process

The final system will function as a complete Event Booking platform capable of managing users, events, bookings, and event analytics through a web-based interface.
